Data Centre Move

2022-01-28 - Support Agent - Comments (0) - General

All customers that are connected for Inbound public IP services, VoIP routing and outbound NAT IP using our data centre node may be affected by an outage this morning due to the disconnection of the service which was scheduled for 12pm being done early. As notified already the service is being moved to our new data centre and will be live by Monday morning.

Regards

Network Team
