East Goscote Mast & Rearsby Mast

2020-08-28 - Support Agent - Comments (0) - General

We noticed further deterioration of the main link from Syston to Eastgoscote mast. Where there is stability at present the unit maybe affected by bad weather. We will continue to monitor the link over the coming days and if the link is further reduced, we swap over to a slower back up link.

Replacement has been scheduled for week starting the 7th September due to cherry picker availability.
